

Introducing inForce Immune Builder

By inLife llc

Dated: Sep 08, 2010

inLife, LLC, distributors of science-based Health & Wellness products, today introduced inForce Immune Builder, a new product that clinical research shows helps stimulate the body's immune system.

Introducing inForce Immune Builder

Irvine, California (September 7, 2010) inLife, LLC, distributors of science-based Health & Wellness products, today introduced inForce Immune Builder, a new product that clinical research shows helps stimulate the body's immune system. inForce's main ingredient, the *Coriolus versicolor* mushroom mycelia extract, is one of the most widely studied supplements for its immune building properties and is now available to the public and the direct-selling industry. Worldwide, there have been over 400 animal and human studies on *Coriolus versicolor*, with over a dozen placebo-based human trials conducted in the west.

inLife Immune Builder with PSP and PSK

inLife offers *Coriolus versicolor* as a Daily Dietary Supplement in vegan capsule form to help maintain and stimulate the body's immune system. *Coriolus versicolor*, PSK and PSP are among the most widely studied supplements for their immune building properties. One would be hard pressed to find another immune boosting product that has had more research completed or positive comments associated with it. The amount of worldwide comments and studies is compelling. inForce Immune Builder is a proprietary blend of both Polysaccharide-K (PSK) and Polysaccharide Peptide (PSP). Both offer much-needed immune building assistance and they can be taken on a daily basis. The products are bottled in the United States in an FDA-registered bottling facility that is cGMP compliant (Current Good Manufacturing Practices).

Hospital and Research Institutes Report on *Coriolus Versicolor*

In the United States, top-ranked hospital and research institutes have reported that "*Coriolus versicolor*, PSK and PSP help boost the body's immune system with limited side effects and safety of daily oral doses for extended periods of time." In addition, *Coriolus versicolor* and its potential positive effects has been studied very closely by M.D. Anderson, University of Texas, Loma Linda University, Beth Israel Deaconess Medical Center (a teaching hospital of Harvard Medical School), The University of San Diego, Sloan-Kettering Center (New York), and Bastyr University (Kenmore, Washington), just to name a few.
