

The Electrophretical Analysis of the Components of Polysaccharide-peptide (PSP)

Xiao-tong Yang and Yong Zhuang
Shanghai Teachers University

Abstract

The components of polysaccharide-peptide (PSP) are analysed by electrophoresis of cellulose acetate membrane and of polyacrylamide gel. The result shows that there are 2 kinds of glycoprotein and 2 kinds of polysaccharide. There are obvious differences between the numbers of components and the nature of electrophoresis of PSP and the polysaccharides of the fruit-bodies of *Yun Zhi* (CVP).
